Wire Transfer Migration to ISO 20022

Important changes are on the horizon for Wire Transfers. Here's some information to get you started on what they are, what they mean, and when they will happen.

What is ISO 20022?

Federal Reserve Banks currently use a proprietary wire format that is specific to the Fedwire Funds Service. This current FAIM format (Fedwire Application Interface Manual) is being replaced in favor of the ISO 20022 (ISO) format, which is a global standard used by many financial institutions.

What does this mean?

All wires sent through the Federal Reserve will need to be in compliance with the ISO 20022 standards before the deadline. There are significant wire format and field label changes associated with this migration.

When is this happening?

The Federal Reserve cut over to ISO 20022 from FAIM is July 14, 2025. All wires sent on or after this date must be in the new ISO format.

Here are some key terminology changes that will take place:

FAIM Format (current)	ISO 20022 Format (effective July 14, 2025)
Credit Account Name	Creditor
Originator	Debtor
Originating Bank/Sending Bank	Debtor AND Instructing Agent
Beneficiary Bank	Creditor Agent
Receiving Bank	Instructed Agent
International Intermediary Bank	Intermediary Agent
Routing Number	Agent ID
Reference Beneficiary	End to End ID
Credit Account Address (lines 1-3)* City State Zip Code Country	Building Number, Street Name Town Name Country Sub Division Post Code Country Code
Account Number	Account Number
Amount	Amount
Remarks	Remittance Information

^{*}Additional address fields available for Creditor Account Address in ISO include: Post Box, Department, Sub Department, Building Name, Floor, Room, Town Location Name, and District Name

Those address fields don't seem to line up. What should we expect on Day 1 (7/14/25)?

Good catch! You should plan to review your Creditors (Beneficiaries) on Day 1, especially those that are tied to any future-dated or recurring wires. You won't be able to make changes to Creditor information prior to July 14, so please ensure you plan to review in a timely manner.

For FAIM formatted future-dated and recurring wires:

- Any wires scheduled to be transmitted on or after 7/11/25 need to be deleted and new ones created in ISO format when that format is available on 7/14/25
- Any FAIM formatted wires transmitted on or after 7/14/25 will be rejected

Additionally, repetitive/template wires will NOT be converted from FAIM to ISO format. These will need to be recreated on or after July 14, 2025.

International USD Wires will also require special attention and will not process without manual intervention! The field of Town Name does not exist currently and will be an ISO-required field as of July 14, 2025.

What can I be doing now?

- Please review your existing wires and delete any that you no longer need or use.
- Be aware of the upcoming changes and review all information we'll be sharing with you up until the migration date.
- Mark your calendar for July 14, 2025! You'll want to log in early on this day and ensure you can create
 and transmit wires. Note that wires will need to be in the ISO format to ensure transmission and
 acceptance.

Will the way wires are set up and sent change as well?

Within Treasury Management Online Banking (Cash Management), changes to the naming conventions for the fields and their labels are the primary changes you will see. There are many behind-the-scenes changes as well, but don't worry – we'll take care of those for you!

Here is an illustrated preview of how the ISO formatted screen will be different for outgoing wires, with references to existing FAIM fields (domestic wire shown).

Please note the ISO screen example provided below may be subject to change.
